

## ESTEEM OVERVIEW

# MICROSOFT ENTERPRISE MOBILITY & SECURITY SOLUTIONS TO SUPPORT GDPR COMPLIANCE

Whether you already have a Microsoft environment or are considering certain Microsoft products, in this infographic, we outline the key tools you can utilise from Microsoft Enterprise Mobility and Security to support your organisation with GDPR compliance.

## GDPR COMPLIANCE AREAS

Data Use / Consent

Right of Access

Right to be Forgotten

Cross-Border Transfers

Cybersecurity

### WHERE MICROSOFT ALIGNS

### MICROSOFT ENTERPRISE MOBILITY & SECURITY

Search / Access

Data Extraction

Data Deletion

Ease of Transfer

Audited Retention

Data Security

Consulting Services

#### The Focus

Right of access  
Right to be forgotten  
Data minimisation

#### Offerings

##### Azure Active Directory

Ensure that only authorised users can access your computing environments, data, and applications, with policies to control, manage and report usage.

##### Azure Information Protection

Although this has clear security benefits, this allows you to classify, label and protect new or existing data, share it securely, track usage and even revoke access remotely.

#### The Focus

Ease of reporting

#### Offerings

##### Azure Information Protection

Includes rich logging and reporting capabilities to monitor distribution of data.

##### Azure AD Privileged Identity Management

Helps you reduce risks associated with administrative access privileges through control, management and reporting of these critical administrative roles.

#### The Focus

Cybersecurity

#### Offerings

##### Microsoft Cloud App Security

Discover all the cloud apps in your environment, identify users and usage and get a risk score for each app. Cloud App Security provides visibility, control and threat protection for the data stored in those cloud apps. Shape your cloud security with Microsoft Intune by setting policies allowing you to control access, encrypt devices, selectively wipe data and control which apps store and share data.

##### Microsoft Advanced Threat Analytics

Helps pinpoint breaches and identifies attackers using behavioral analytics and anomaly detection. It is deployed on-premises and works with your existing Active Directory deployment.

##### Azure Information Protection

Although this enables improved access to data through classification and labelling, it also allows you to share data securely, track usage and even revoke access remotely.

#### The Focus

GDPR Compliance

#### Offerings

##### GDPR Gap Analysis

Understand where you currently stand in relation to the the compliance requirements under the GDPR. Analyse the gaps in your processes and receive complete advice on the remediation steps required to be fully compliant.

Gold  
Microsoft Partner

As a Microsoft Gold Partner and Cloud Service Provider, Esteem is experienced in delivering a range of packaged and bespoke services to design, implement and support solutions across the entire Microsoft stack.
